FACTS. BOUNDARIES. PROFESSIONAL HANDOFF.

01

Purpose and limits

A commercial preparation standard for an international owner. It organizes the business file without making immigration decisions.

PURPOSE

This standard governs how an international owner organizes a commercial U.S. rental project before and during professional review. It keeps the operating project, investment picture, professional questions, and evidence references in a controlled sequence.

THIS STANDARD DOES NOT

- **Determine E-2 or any other immigration classification.** Eligibility, classification, filing strategy, and legal conclusions belong to qualified immigration counsel.
- **Select a strategy or decide legal sufficiency.** This standard does not decide whether an investment is substantial, sufficiently committed, marginal or non-marginal, or whether a source of funds is legally sufficient.
- **Prepare, file, or represent.** It does not prepare immigration filings, answer government requests, represent an applicant, or guarantee admission or work authorization.
- **Guarantee the business.** It does not guarantee licensing, insurance, financing, demand, operating results, or profit.

WORK AUTHORIZATION BOUNDARY

Ownership of a company is not work authorization. The owner must rely on qualified immigration counsel for advice about when and how the owner may lawfully work for, direct, or manage the U.S. business.

02

How the house moves

The project advances on labeled facts, controlled assumptions, and deliberate pauses when a professional owns the decision.

FACTS LABELED

Verified business facts are separated from projections, open questions, and assumptions. A commercial file should show what is known and what is still being verified.

ASSUMPTIONS LABELED

Market, cost, timing, ownership, staffing, or launch assumptions remain assumptions until supported. An assumption is never dressed as professional approval.

PAUSE FOR PROFESSIONALS

Pause when immigration, legal, tax, accounting, insurance, banking, licensing, employment, or another professional judgment can change the model or timing.

INDEX, DO NOT COLLECT

Highly sensitive evidence does not sit in the TWM workspace. The house indexes what exists, where it is held, and who receives it through an approved professional channel.

OPERATING RULE

The commercial preparation can move while professional questions are open only when those open questions do not make the next commitment premature. When the answer can materially change the project, pause the commitment and obtain the review.

03

The eleven preparation gates

The gates provide order only. Each gate points to the controlled file that owns the detail; this standard does not duplicate those files.

GATE	CONTROL QUESTION	OWNS THE DETAIL
01 Journey + professionals	Who advises before capital moves?	This Standard + International Record
02 Site and market	Can this place support the model?	Business Plan + Local Rules
03 Investment picture	What is planned, committed, and paid?	International Record + Office + Fleet
04 Formation index	What entity work is listed for counsel?	International Record
05 Model	Are assumptions sourced and stressed?	Forecasting
06 Operating house	Can the customer journey run?	SOP + Pickup & Return + Agreement + Fleet + Local Rules

GATE DISCIPLINE

A gate closes because the responsible file contains enough evidence for the next commercial decision. Closing a gate is not an immigration conclusion and does not make a professional review unnecessary.

03

The eleven preparation gates

The second half of the sequence organizes records, systems, people, the commercial package, and the professional handoff.

GATE	CONTROL QUESTION	OWNS THE DETAIL
07 House file	Are records in the right drawer?	Office Standard + each controlled Record
08 Systems	Are tools named without creating a vendor rule?	Office Standard
09 People	If people are needed, is training controlled?	Training Standard + Training Record
10 Package	Is the commercial file assembled for professional review?	International Record + Business Plan
11 Counsel	Is the handoff clean, current, and traceable?	International Record

AFTER FIRST OPERATIONS

The operating launch is controlled through the **Launch Roadmap**. After the initial operating review, the business moves into **Road Beyond Launch**. This International Standard does not become the growth manual.

NO DUPLICATION

Every other manual stays itself. This standard coordinates the international preparation sequence and professional handoff; it does not rewrite the Business Plan, Forecasting, SOP, Fleet, Local Rules, Office, Training, or customer documents.

04

Capital and immigration pause

Commercial readiness and immigration timing are related by consequence, but they are not the same decision.

DO NOT TREAT A FILING DATE AS A LAUNCH DATE

A filing, appointment, review, approval, admission, or other immigration milestone must not be used by this standard as proof that the commercial operation is ready to open. Launch readiness belongs to the operating controls and applicable professional advice.

PAUSE BEFORE DEPENDENT CAPITAL MOVES WHEN

- **The site is still materially open.** A location assumption can change storage, access, licensing, operating area, insurance, and the fleet decision.
- **Insurance availability or scope is still materially open.** The project should not build around coverage that has not been confirmed for the intended activity.
- **Counsel has an open question that can change ownership, timing, role, transfer, commitment, or another material part of the model.**
- **The funding path is not commercially organized.** Planned, committed, and paid amounts should remain distinguishable before additional dependent commitments are made.

DIVISION OF AUTHORITY

Counsel owns filing timing and immigration legal advice. This book owns the commercial readiness sequence, the evidence index, and the clarity of the business file presented for review.

05

Evidence rule

The TWM workspace records the existence and location of evidence. It does not become the vault for highly sensitive personal or immigration records.

INDEX RULE
Index only: what exists, where it lives, who holds it, when it was last updated, and which professional receives it. The index may use an internal reference number instead of reproducing sensitive content.

EVIDENCE TYPE	TWM WORKSPACE	TRANSFER / STORAGE RULE
Business plan, commercial assumptions, operating records	May be referenced or stored according to the Office Standard.	Use the controlled business workspace and current version rules.
Passports / identity records	Do not upload here.	Index only; transfer through the professional secure channel.
Bank statements / wire confirmations	Do not upload here.	Index only; transfer through the professional secure channel.
Tax returns / immigration records / sensitive government records	Do not upload here.	Index only; transfer through the professional secure channel.

THE PROFESSIONAL CHANNEL CONTROLS THE TRANSFER

The attorney, tax professional, bank, insurer, or other qualified professional may specify a secure portal, encrypted method, or another approved process. Follow that process. A convenient shared folder is not a substitute for the professional security requirement.

06

Relation of documents

The international layer coordinates the preparation. It does not absorb the other controlled systems.

DOCUMENT	OWNS
International Launcher Standard	Boundary, professional pause, evidence handling rule, and preparation gate order.
International Control Record	International owner profile, professional contacts, investment / formation indexes, package control, review requests, and handoff history.
Business Plan	Concept, market, local constraints, commercial model, investment picture, and planning decision.
Forecasting	Labeled assumptions, multi-year model, stress test, decision, and actual-versus-model updates.
SOP / Agreement / Pickup & Return / Fleet / Local Rules	The real operating house and customer / asset controls.
Office / Training	Record architecture, access, retention, employee preparation, and role authorization.
Launch Roadmap / Road Beyond	Controlled path to first operations, then evidence-based review after launch.

ONE RULE

When another controlled document already owns the detail, this standard cites that document. It does not copy the procedure into the international file.

07

Closing notice

A disciplined commercial file can improve professional review. It does not turn business preparation into immigration advice or approval.

EXPERIENCE-BASED PREPARATION RESOURCE

International Launcher Standard is an experience-based business-preparation and document-organization resource. It is not an immigration service, legal service, visa-preparation service, investment advisory service, accounting service, tax service, or eligibility assessment.

THE OWNER REMAINS RESPONSIBLE FOR

- Verifying current business, licensing, insurance, tax, employment, banking, property, and operating requirements with the appropriate authorities and qualified professionals.
 - Using qualified immigration counsel for eligibility, classification, work authorization, timing, filings, government responses, and other immigration legal questions.
 - Keeping material site, ownership, investment, operating, and professional-review changes current across the controlled records.
 - Using secure professional channels for passports, bank statements, tax returns, wire records, immigration records, and other highly sensitive evidence.
-

PREPARE THE BUSINESS.

ORGANIZE THE INVESTMENT.

MEET THE PROFESSIONALS.

We share the method. You decide how to build it.
